SUMMARY

Data analyst with a decade on the business side — luxury retail and EMEA sales — and a marketing degree (ISC Paris). AI now does the mechanical work; what it can't do is know what the numbers mean in a real business, and get people to act on them. That is the job I have done for ten years. At Marshall (~€350M audio group, +29% growth in 2023): the monthly EMEA report for ~10 countries and key accounts Fnac and Boulanger, with the cause behind every drop — stock shortage, promo calendar, margin or volume. At MERCI (1,500 m^2, 1.5M visitors a year): seven years advising a luxury clientele. Certified Data Analyst, RNCP 6 (2026). Fluent with AI-assisted workflows (Claude, ChatGPT, Perplexity, Gemini) — with the business judgment to challenge what they produce. Trilingual (EN/FR/HI). GDPR-aware.

TECHNICAL SKILLS

Languages & tools: Python (Pandas) | SQL (SQLite, PostgreSQL) | Power BI (DAX) | Power Query (ETL) | Advanced Excel | Qlik Sense | Navision

AI-assisted analytics: Claude, ChatGPT, Gemini and Perplexity for code, drafting and research | prompt design | AI agents for research and multi-step workflows | human-in-the-loop validation

Methods: Data modelling | Data cleaning & transformation | Exploratory data analysis | Statistics (regression, clustering, correlation) | KPI design & reporting | Data visualisation | Functional specifications & documentation | GDPR / data privacy

PROFESSIONAL EXPERIENCE

EMEA Sales Coordinator | Marshall — Paris / Stockholm | 2022 – 2024

- Owned the monthly EMEA sales report in Qlik Sense — the sales of ~10 countries and key accounts Fnac and Boulanger that carried a ~€350M group's +29% growth — the figures the sales manager and account managers used to decide, every month.
- Answered the question behind the numbers: when sales dropped, I found the cause — a stock shortage from Asian production, a promo-calendar effect (back-to-school, Black Friday), or a genuine demand dip — and whether the real issue was margin or volume.
- Checked the data before it went out: a dip at Fnac could be an out-of-stock, not lost demand; a Navision export could double-count returns. The reports went out clean — and trusted.
- Fed the sales forecast with prior-year performance and product availability; managed customer and distributor master data in Navision; worked daily with Paris and Stockholm teams.

Client Consultant, Women's Fashion | MERCI Concept Store — Paris | 2015 – 2022

- Seven years advising an international luxury clientele in a 1,500 m^2 concept store (~€15M revenue, 1.5M visitors a year) — and seven years of never missing a personal monthly sales target.
- Read customer behaviour no dataset held — which exclusive brands pulled buyers, how VIP clients ignore discount-driven CRM, why pieces come back — and used it to steer clients and build repeat business.
- Finished above target month after month, with peaks during Fashion Week and Design Week, and carried the invitation-only events with major fashion houses — the weeks that made the year's sales.

DATA PROJECTS — OPENCLASSROOMS (2025 – 2026)

AI-assisted workflow: Claude for code and drafting; I defined the business questions, validated every output and made the final decisions.

- **Beverage business dashboard (Power BI):** five-table model (Finance, Sales, Promo, Web, Dates); DAX measures for margin, stock rotation, promotion ROI and month-over-month change; five pages ending in three concrete recommendations (renegotiate rising supplier prices, target promotions at high-margin products, clear dormant stock).
- **BottleNeck (Python):** audited and cleaned three stock and sales files (825 products) and merged them into one reliable table; detected price outliers (31 products, 4.3% of the catalogue); compared Pearson vs Spearman correlation and K-Means vs DBSCAN clustering; functional specification, documentation and GDPR review.
- **Sanitoral (Power BI):** project-tracking dashboard for IT (6 phases) and Marketing (4 phases) projects, tailored to three management profiles, with a world map.
- **Paris real estate (Python):** property valuation with linear regression (R^2 = 0.98) and K-Means clustering separating apartments from commercial premises by price per m^2.
- **CRM & GDPR (Power Query, SQL):** GDPR-compliant anonymisation of a CRM database after a CNIL sanction; five data-governance recommendations.
- **SQL & Excel:** advanced queries on home-insurance and customer-satisfaction (NPS) databases; Excel analysis and visualisation of NBA data.

EDUCATION

Business Intelligence Analyst — Data Analyst title, RNCP 6 | OpenClassrooms | 2025 – 2026

- Certified 30 September 2026. Business needs analysis, SQL and relational data modelling, ETL and data cleaning with Python (Pandas) and Power Query, Power BI dashboards and KPI definition.

International Luxury Management & Marketing | ISC Paris | 2012 – 2014

Bachelor's degree in French Language and Culture | University of Delhi | 2006 – 2010

OTHER EXPERIENCE
